### Optimality of A\* Tree Search

### Assume:

- A is an optimal goal node
- B is a suboptimal goal node
- h is admissible

### Claim:

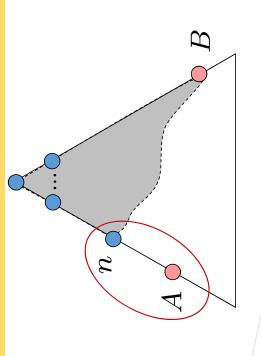

A will exit the fringe before B

# Optimality of A\* Tree Search: Blocking

### Proof:

- Imagine B is on the fringe
- Some ancestor *n* of A is on the fringe, too (maybe A!)
- Claim: n will be expanded before B
- 1. f(n) is less or equal to f(A)

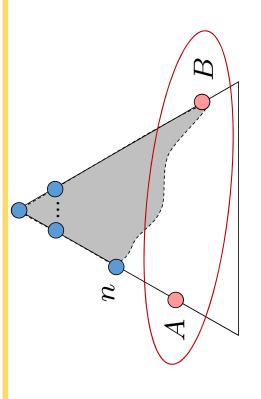

$$f(n) = g(n) + h(n)$$
  
$$f(n) \le g(A)$$
  
$$g(A) = f(A)$$

# Optimality of A\* Tree Search: Blocking

### Proof:

- Imagine B is on the fringe
- Some ancestor n of A is on the fringe, too (maybe A!)
- Claim: n will be expanded before B
- 1. f(n) is less or equal to f(A)
- 2. f(A) is less than f(B)

$$g(A) < g(B)$$
$$f(A) < f(B)$$

B is suboptimal 
$$h = 0$$
 at a goal

# Optimality of A\* Tree Search: Blocking

### Proof:

- Imagine B is on the fringe
- Some ancestor *n* of A is on the fringe, too (maybe A!)
- Claim: n will be expanded before B
- 1. f(n) is less or equal to f(A)
- 2. f(A) is less than f(B)
- n expands before B
- All ancestors of A expand before B
- A expands before B
- A\* search is optimal
